Education

Simon Fraser University Expected May 2028
Bachelor of Science in Computer Science - Software Systems *Burnaby, BC*

University of Waterloo Dec. 2024
Bachelor of Math in Honours Mathematics *Waterloo, ON*

Experience

WSP May 2026 – Present
Software Engineer Intern *Vancouver, BC*

- Developed and owned a resource planning tool for structural engineering teams replacing a manual Excel workflow and **reducing** planning time by approximately **60%** using **Next.js**, **NestJS**, and **Prisma ORM**.
- Improved planning accuracy and visibility by replacing static spreadsheets with a dynamic database layer, enabling instant updates across hundreds of resource entries.
- Built a **Python ETL pipeline** to migrate **15k+** rows from Excel to **Azure SQL**, designing **10+** tables across 5 schemas and achieving **10-100x** faster load times than row-wise inserts.

Blueprint Feb. 2026 – Present
Software Engineer *Burnaby, BC*

- Redesigned key UI components based on direct stakeholder feedback for a media empowerment page serving **7,400+ users**, improving usability and workflow efficiency.
- Streamlined content management and delivery for a library of **2,600+** community-created short films by integrating **GraphQL** queries with WordPress CMS, enabling faster and more organized access to film data.

Robot Soccer Design Team Sep. 2025 – Present
Software Developer *Burnaby, BC*

- Developed a **C++/Qt** path-planning component using RVO2 (ORCA), including a coordinator layer for **agent/obstacle** management, timestep simulation, and signal-driven velocity updates.
- Collaborated cross-functionally with **5+ team leads** in weekly design reviews, delivering **15+ feature tickets** on schedule through **Agile workflows** managed via **Jira** and **GitLab**.

Projects

SFU Course Compass (Full-Stack) | *React.js, Spring Boot (Java), AWS (EC2, RDS), PostgreSQL*

- Built and deployed full-stack course review app to the **cloud** through **AWS EC2** by containerizing a **Spring Boot** backend to a **Docker Image** and configuring a **RDS PostgreSQL** database on the instance.
- Automated **deployments** using GitHub Actions **CI/CD pipeline** to build, package, and SSH-deploy to EC2.
- Secured the app with **JWT-based authentication** and BCrypt password hashing, protecting all API endpoints via **Spring Security** and returning signed tokens on login for stateless session management.

GANPI (StormHacks 2025 Winner) | *C++, Systems Programming, Gemini AI API*

- Designed and implemented a file summarization feature that generates concise, human-readable summaries of file contents, allowing users to quickly understand documents without opening them.
- Debugged and resolved **critical parsing errors** in API response handling, improving summarization accuracy by **40%** and eliminating **edge-case failures** in file processing.

SpikeConnect (DreamHacks 2025 Winner) | *React Native, Python*

- Built a **mobile-first social network** for volleyball enthusiasts, implementing player matchmaking algorithms, location-based game discovery, and automated tournament bracketing systems.
- Engineered a dynamic community post section with robust engagement features including likes, comments, and sharing capabilities, fostering active user interaction with **React Native** and **Python**.

Technical Skills

Languages & Databases: Python, C/C++, Node.js, Typescript/Javascript, Java, PostgreSQL, Azure SQL
Technologies: Next.js, NestJS, Prisma, React.js, React Native, Tailwind CSS, Express, Spring Boot
Dev Tools: VS Code, Cursor, Linux, Git, GitHub, AWS, Bash, GitHub Actions, Docker, Claude Code, Render, Vercel
